

U.S. ENERGY TRANSITION REPORT

Investing in the U.S. clean energy market? Timing is right - but getting the right information on U.S. policies and markets is critical for success.

The clean energy market in the United States has grown rapidly in recent years and is expected to reach new heights as the government seeks to decarbonize the economy and Americans face the dire consequences of climate change.

This moment offers a unique investment opportunity for those who understand the U.S. energy market.

Information on U.S. clean energy policies and markets are critical for success – but it can be hard to stay up to date with the right information.

That's why CEA created the **U.S. Energy Transition Report**, equipping clean energy developers and financiers with the insider knowledge and strategic information needed to make the best investment decisions and take advantage of the many state and federal clean energy programs and incentives.

Successfully navigating the U.S. clean energy market requires up-to-date intelligence in several areas:

	1. Independent renewable energy mandates and policies at the state level	Assessing the differences between each state's rules and incentives is critical to deciding where to invest.
	2. Ever-changing federal programs and incentives	As the federal government works to advance the clean energy transition, new programs and incentives for clean energy development are constantly being created and changed. Stay informed to make the most of your investment.
	3. Supply challenges, constraints, and opportunities	The clean energy market in the U.S. depends on imports and is heavily impacted by government tariffs and restrictions. Access to the right information is critical to avoiding costly delays and maintaining a robust supply chain.
	4. Industry goals and investments	Increasing demand for climate-friendly products and services is driving companies and organizations to embrace clean energy alternatives, creating new growth opportunities for this market.

There is just too much information out there. Let the specialists at CEA sort it out for you.

Every two weeks, the **U.S. Energy Transition Report** brings you a carefully curated round-up of the most important clean energy news in the United States, along with exclusive expert analysis of its impact on the market. **This is the information you need at the right time.**

CEA is the leading source of data and analysis in the clean energy industry. Our work with buyers and suppliers around the world, including on-the-ground projects in hundreds of factories and job sites, provides CEA with **unparalleled insights** into industry dynamics, trends, and drivers.

We look forward to sharing that knowledge with you to keep you ahead of the renewable energy landscape.
